##### **codeforces Invitation Link:**

Alternative Link: <https://codeforces.com/contests/688801>

[The alternative link will **only work** after you have successfully registered using the first link.]

**Deadline:** May 3, 2026 2:00 PM

**No submissions after the deadline is accepted for grading.**

#### **Quiz 05:**

- Date: Next week as per class schedule
- Syllabus: Assignment 07
- Take Preparation for both assignment problems and outside assignment problems.

#### **Learning Outcome:**

After completing this lab assignment, students will be able to use Dijkstra's algorithm to solve and adapt shortest path problems in different situations. They will learn to handle different definitions of path cost and work with extra conditions or constraints, building a stronger understanding of how algorithms can be applied and extended to solve complex problems.
