CSE221: Algorithms
Lab-05
Summer 2026

Announcements for Students

Quiz 1-3 and Assignment 1-3 marks have been published. You can view your lab marks from the lab portal [click here].

If you find any discrepancies, please inform your lab faculties by Monday, 20/07/2026, 5:00 PM.

After that, no further concerns will be considered.

Please note that if you are found to be involved in any unfair means, your marks will be changed AT ANY TIME in accordance with the lab policy.

About Quiz 04:

Date: August 15-16, 2026 (as per your lab class schedule)
Syllabus: Lab 04 & 05 content

Take Preparation for both assignment problems and outside assignment problems
[Student Drive Folder Link]

Also, the next Lab-06 class will be held on August 15-16, 2026 (as per your lab class schedule)

Assignment-05 Links:

Codeforces Invitation Link:
https://codeforces.com/contestInvitation/619ab8db56051844d016e425fc5a3f93220bd1a3

Alternative Link: **https://codeforces.com/contests/704851**
[The alternative link will **only work** after you have successfully registered using the first link.]

Deadline: `Aug 16, 2026 2:00 PM`

Note: Use FAST I/O in your code to avoid Time Limit Exceeded (TLE), especially in the quiz.

After the deadline ends, you can submit your solution by entering the contest as a Virtual Participant for practice purposes. **However, please note, submissions after the deadline are not accepted for grading.**

Please note that your assignment submissions will not be evaluated if they are flagged as AI-generated.

Learning Outcome:

Upon successful completion of this lab, students will have a solid understanding of graph and grid traversal techniques. They will be able to apply fundamental concepts such as graph traversal, cycle detection, shortest path finding, and flood fill in practical problem-solving scenarios. Students will also learn how similar ideas extend to two-dimensional grids, enabling them to identify reachable regions and solve practical search problems. Overall, this lab aims to help students connect the theory of graph algorithms with their practical use in code, and to develop confidence in choosing and applying appropriate traversal strategies.
