Instructions for Lab Environment Setup

To run the Quiz checker you need to set up your PC environment. Please note, the quiz checkers can be used in only Windows machines with the following softwares installed:

- mingw64 from msys2
- jdk-25 (if the solution is in Java)
- pypy3 (if the solution is in Python)

A batch script (link) can be used to install these softwares to support the quiz checkers. Alternatively these softwares can also be acquired manually:

- mingw64 from msys2: Download and install msys2 (link) and launch MSYS2 (msys2.exe). A terminal-like window should come, execute the following command there: “pacman -Syu --noconfirm mingw-w64-x86_64-gcc” (without quotes). Then add the following folder to System Environment Variable PATH: “Msys2_Install_Location\mingw64\bin\” (without quotes, place the install location).
- Jdk-25: Download and install jdk-25 (link). Then add the following folder to System Environment Variable PATH: “JDK25_Install_Location\bin\” (without quotes, place the install location).
- pypy3: Download and install pypy3 (link). Then add the following folder to System Environment Variable PATH: “Pypy_Install_Location\” (without quotes, place the install location).
- Ensure that the path entries for these installations are at the top.
